LOS	E	A	E	C	A	F	F

HCM Average Control Delay	**61.6**
HCM Level of Service	**E**

NOTE:

Approach Delays computed using Sychro 6.0 with a single controller for these two intersections.

Synchro output sheets are attached.

HCM Calculation does not include WB approach at Intersection of 65th/Shellmound nor the EB approach at 65th/Overland.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

RE: Marketplace Redevelopment Project - Parking Analysis
WDI Job #05043.312

Dear Denise:

Thank you for choosing Watry Design, Inc. to prepare the parking analysis for the redevelopment of the Marketplace Project Site for the proposed Marketplace Redevelopment Planned Unit Development/Preliminary Development Plan ("PDP"). You requested that we do the following: describe the existing parking conditions; verify existing demand through parking surveys; analyze the demand under the PDP for existing and new uses, both during and after construction; and propose methods and options to assure adequate parking to meet existing and new demand through all phases of development.

As discussed in more detail below and shown on the attached tables and illustrative drawings, the existing parking on the Marketplace Project Site meets and exceeds existing demand. Adequate parking for existing and new demand can be provided both during and after construction under the proposed PDP with the re-configuration of the existing parking lot, phased construction and the implementation of a temporary valet-assist parking plan.

We understand the proposed PDP also includes the development of a mixed use building on the 64th & Christie Project Site, which will provide all its required parking within the building and will not share parking with the Marketplace Project Site. Therefore, this report addresses only the existing and proposed shared parking within the Marketplace Project Site. As shown on the Illustrative Drawings, this report does take into account the effect of the proposed lot line adjustment between the Marketplace Project Site and 64th & Christie Project Site with respect to the locations where on-grade parking will be provided.

In addition, please note that although the proposed PDP does not include the Woodfin Hotel Site, the existing parking requirement of 1,067 parking spaces set forth in Section 3.2.4 the Owner Participation Agreement ("OPA") applies to the "Project Area" for the OPA, which includes both the Marketplace Project Site and the adjacent Woodfin Hotel. Under the Woodfin's Use Permit 96-3, Conditions of Approval Section III.C, the Woodfin Hotel is required to provide 218 parking spaces, including 16 shared parking spaces on the Marketplace Project Site. Therefore, this report addresses parking on the Woodfin Hotel Site as part of the overall parking analysis.

The PDP proposes to redevelop the Marketplace Project Site and add the "Shellmound Building," a mix use, residential and retail, building with structured parking and two new retail pad buildings, one near the existing Borders and one near City Park. The PDP provides both a set of maximum development standards ("Maximum Plan") as well as a proposed, more detailed "Illustrative Plan" for the new uses. See PDP Application, Table 2. This report analyzes parking under both the Maximum Plan and the Illustrative Plan. The Illustrative Plan is depicted on all the attached illustrative drawings, consistent with the PDP illustrative figures.

Please note the following assumptions are used in this report:

- Existing 202 parking spaces on the Woodfin Hotel Site is conservatively assumed to be *exclusive* hotel parking (not currently the case under the existing Reciprocal Easement Agreement);
- Residential parking in the Shellmound Building would be assigned, but all parking spaces on the Marketplace Project Site would be considered shared parking because the residential users on the site would be able to walk to all other uses within the Marketplace Project Site and reduce the overall demand for parking;
- Demand for the existing uses on the Marketplace Project Site is based on the existing parking requirement of 1,067 spaces pursuant to OPA Section 3.4.2 and Master Use Permit 88-7, and new uses within the Shellmound Building and new retail pads is based on the current requirements of Article 55 of the Emeryville Municipal Code;
- New residential demand is calculated using the Illustrative Plan unit mix, which is intended to be conceptual and may be adjusted in the Final Development Plan;
- For the Shellmound Building, both the Illustrative and Maximum Plan analysis assume the new structured parking garage would yield 540 parking spaces, but the number may be higher or lower depending on final architectural design;
- For new retail/commercial demand, this report conservatively assumes a 10% reduction for interior common areas within a building (i.e., hallways, mechanical spaces, elevator shafts and similar "non-usable" interior spaces) for commercial uses per Section 9-4.55.5 of the Municipal Code, although the Code allows up to a 20% reduction.
- For new retail within the Shellmound Building, although the new retail may be either general retail or local retail, this parking analysis conservatively assumes a 4:1000 (one space per 250 square feet) for regional retail rather than 3:1000 (one space per 333 square feet) for local retail.
- The PDP proposes approximately four bicycle racks of up to 20 bicycles. To be conservative, this report does not include any reduction credit for bicycles (6:1) allowed pursuant to Section 9-4.55.2(e).
- In the event that the final design for the Project, or changes in the above assumptions, results in change in the supply or demand, this parking analysis would be revised accordingly.

This report analyzes the supply and demand for both the Maximum and Illustrative Plans in the following six phases of the redevelopment of the Marketplace Project Site: existing parking conditions, the re-configuration of the existing on-grade parking to maximize the existing parking lots, implementation of a valet-assist parking program for office users, construction of the Shellmound Building, completion and occupancy of the Shellmound Building and construction and operation of the new retail pad buildings.

P0 - Existing Parking Requirement

The existing parking requirement is 1,067 spaces pursuant to OPA Section 3.2.4. The existing uses and parking spaces are depicted on Drawing P0 and described in more detail on Table P0.

In order to verify that the existing parking meets actual existing demand, All Traffic Data, a parking survey company, conducted three vacancy surveys on a Friday, Saturday and Sunday in June 2005, to provide a representative period for the site. The survey indicated a range of up to 800 vacancies to 365 vacancies during the

peak load period. See attached graph, *Marketplace Redevelopment Parking Study*. These vacancies can be attributed to the effects of a "Captive Audience" or "Market Synergy typical for an operating mixed use shared parking project" where a visitor parks in one space to visit multiple uses on the site. Based on our review, the existing shared parking meets, and likely exceeds, existing demand.

P1 - Reconfigured On-Grade Parking Plan

Based on an analysis of the current parking lot and the dimension requirements of Municipal Code Section 9-4.55.7 and Table 9-4.55, it is our opinion that the current on-grade parking configuration does not maximize on-grade parking within the parking lot. As depicted on Drawing P1 and summarized on Table P1, an additional 183 spaces can be provided outside of the proposed Shellmound Building Site. This re-configuration will be completed prior to initiation of construction of the Shellmound Building, and results in surplus of 183 shared parking spaces over the existing parking requirement.

P1A - Valet-Assisted Parking Option (Office Only)

Because the Shellmound Building site currently contains 251 on-grade parking spaces, these spaces will be removed and unavailable during construction. The re-configuration will yield 183 spaces, so in order to avoid a deficit during construction, we recommend the use of a temporary valet-assist program (similar to the program described in the attached Ampco materials) during week days for the office users during the construction period if conditions warrant the need. We believe that the demand presented by the office is only during a Monday through Friday as a peak load to the site, and would not need the valet-assisted program for the weekends as the load for office diminishes substantially. As shown on Drawing P1A, 22 valet reserved spaces are proposed to the east of the UA Theater, 44 adjacent to City Park and 96 under the Powell Street over-crossing, subject to City and Agency approval. The valet-assist program would provide a total of 162 additional spaces and a total surplus of 345 parking spaces over the existing parking requirement.

P2 - Shellmound Building Construction Impact Plan

During construction, the existing 251 on-grade parking spaces would be removed. As depicted on Drawing P2 and Table P2, with the re-configured on-grade parking and valet-assist program, there would be a surplus of 94 spaces during construction. During construction, construction-related vehicles will park within the Shellmound Building site.

P2A - Shellmound Building Occupancy Plan

After construction, the Shellmound Building is assumed to provide 540 parking spaces in the new structured parking garage within the mixed-use building, and the valet-assisted program would end, see Drawing P2A and Table P2A. The total residential and retail demand would be 309 under the Illustrative Plan and 403 under the Maximum Plan, resulting in a surplus of 163 parking spaces and 69 parking spaces, respectively. .

P3 - New Retail Pad Building Occupancy Plan

In order to minimize parking impacts, the new retail pad buildings would not be constructed until after the Shellmound Building garage opens. The construction of the retail pad adjacent to City Park would eliminate 28 existing on-grade parking spaces. The new general retail pad buildings would result in a new demand of 35 spaces under the Illustrative Plan and 38 spaces under the Maximum Plan, resulting in a surplus of 100 parking spaces and 3 parking spaces, respectively. See Drawing P3 and Table P3.

We welcome any additional comments or questions that may have arisen during the review of this letter and its attachments. We thank you again for choosing Watry Design, Inc., and look forward to working with you on future projects.

Sincerely yours,

RE: Attendant-Assist Parking Plan and Cost Proposal

Dear Matt:

I enjoyed meeting with you and Denise Pinkston recently to review TMG's possible need for attendant-assist parking services to accommodate the displaced parking demand which will be generated during the planned construction at their Emeryville site.

The main focus of the program we have been asked to develop is to accommodate additional cars in an 'attendant-assist' mode on the Christie Avenue and Powell St. lots. It is anticipated that the need will arise when construction begins in 2007 and could continue for a year or more over the course of construction.

We have used the attendant-assist concept many times. As we discussed, the program is easiest to provide in staff parking areas, where the inconvenience to patrons is minimized, since most of the cars come in all at once and generally leave at a pre-determined time at the end of the day. This means that there is significantly less of the constant in-and-out traffic that characterizes the typical visitor's parking area. That said, we have provided these services to clients in various visitor parking environments and it has been very successful.

Before we get too far along, it would be useful to further explain the "attendant-assist" operating format: Under the attendant-assist concept, the selected parking area is allowed to fill completely with the cars of patrons who have parked and locked their own vehicles. The parking attendants provided direct additional cars to park in the aisles, blocking the other cars in. The attendants issue claim checks to the parkers in exchange for their keys, and lock the keys in a nearby keybox. The attendants move cars only as necessary to let blocked vehicles exit.

Toward the end of the day, as regular parking spaces become available, the attendants will move aisle cars into these spaces, to make exiting easier for all patrons. Any keys held after posted closing time would be turned over to project security. We can discuss the mechanics of this aspect of our plan at a future time, but generally at other operations it hasn't been much of an issue.

Please note that no cars will remain "stacked" in the aisles at the close of the day. All cars for which we still possess keys will be parked and locked in regular marked stalls in a to-be-designated area of the lot in which the service is provided. Any keys provided to security would be accompanied by a list showing the car's license number, ticket number and the location of the car, to assist patrons who may retrieve their vehicles after our attendants have ended their duties for the day.

Summary of Proposed Operating Plan

- Service would begin @ 8:00 a.m. and end at 6:00p.m., Monday - Friday
- Signage would be posted in all stack parking areas to advise patrons that the service is in underway: "Attendant-Assist Parking Service In Effect – Please Leave Keys With Attendant". (Final language subject to approval.)
- Program can be phased in to coincide with construction, and adjusted as demand warrants. Pricing model is based on a minimum 80 hours per week of service, per lot. Additional areas can be converted to Attendant-Assist parking as needed with one week's advance notice to Ampco to allow us to prepare for staffing, equipment needs, etc.)
- Minimal Physical changes required:

    1) *A rented attendant's booth would be required for each lot where stack parking services are operating.*

    2) *Locking Key Boxes would be provided, as needed at each lot, for secure storage of all patron keys*

    3) *Portable signage and traffic cones will be provided as necessary to direct patrons, identify hours of service and after hours policies and to delineate service area*

Staffing

All employees will be in full uniform at all times when on duty. We will provide valet attendants for (16) hours per day at each lot. We will stagger the shifts for these employees to provide coverage from 8:00 a.m. – 6:00 p.m., for ease of key retrieval. This level of staffing is adequate to provide a high level of service in a visitor parking scenario, essentially providing (2) employees during most operating hours. (By comparison, in a strictly employee-only parking environment, we could provide an acceptable level of service using only (1) attendant during all operating hours.)

Each of the above shifts includes a ½ hour lunch break. We believe this schedule will provide an adequate level of service, while allowing us to provide personnel in a cost-effective manner.

Equipment & Supplies

We will purchase the required signage and other equipment as necessary (any booths needed will be rented at an approximate cost of $250 per month). We anticipate that all necessary start up equipment can be provided for less than $1,500 per lot.

This will include signage, cones, locking keyboxes, etc.. Ampco will pay for the cost of this equipment up front and will pass this cost through on the first month's operating statement.

Insurance

We will provide commercial general liability insurance and garagekeeper's legal liability insurance covering TMG and Ampco in the amount of $5,000,000 (but only to the extent TMG is indemnified pursuant to an executed Parking Management Agreement) and statutory coverage for worker's compensation insurance. This coverage will be subject to a deductible of $2,500.00 per occurrence (there is no deductible on the commercial general liability policy).

Term

We will discuss an appropriate term for the provision of these services once TMG has confirmed the areas to be utilized and the expected duration of the project.

Cost Proposal

We propose to provide our complete services on an actual cost basis, and each month will provide a full disclosure statement which details all costs incurred in the operation of each of the facilities, with separate detail sheets showing labor, labor burden, overhead, and any building and equipment costs. In addition, Ampco shall receive fixed monthly allocations of $150 and $250 per month, per lot, to cover its costs of providing offsite administrative and supervisory support services, respectively, to the locations.

As its fee for providing the complete attendant-assist parking services described herein, Ampco shall receive a monthly fee of $1,000 per location.

I've provided a preliminary cost estimate to provide the service at the Christie Ave. and Powell St. lots, along with a brief summary explanation of the individual costs noted. While this is not a guarantee of the final cost of the program, these estimates should give you a good idea of the current costs to implement the services as described herein.

Matt, all of us at Ampco System Parking look forward to providing our attendant-assist parking services to TMG at its Emeryville project. Please call me when you and the client are ready to take the next step on this exciting undertaking.

Sincerely,

James M. Hornback
Director of Business Development

Note: All of the foregoing costs are estimates and subject to change. Startup costs covers basic signage and equipment only.

Prepared by Ampco System Parking

Emeryville Project 8/1/2005

Attendant Assist Service - Preliminary Estimate of Operating Expense

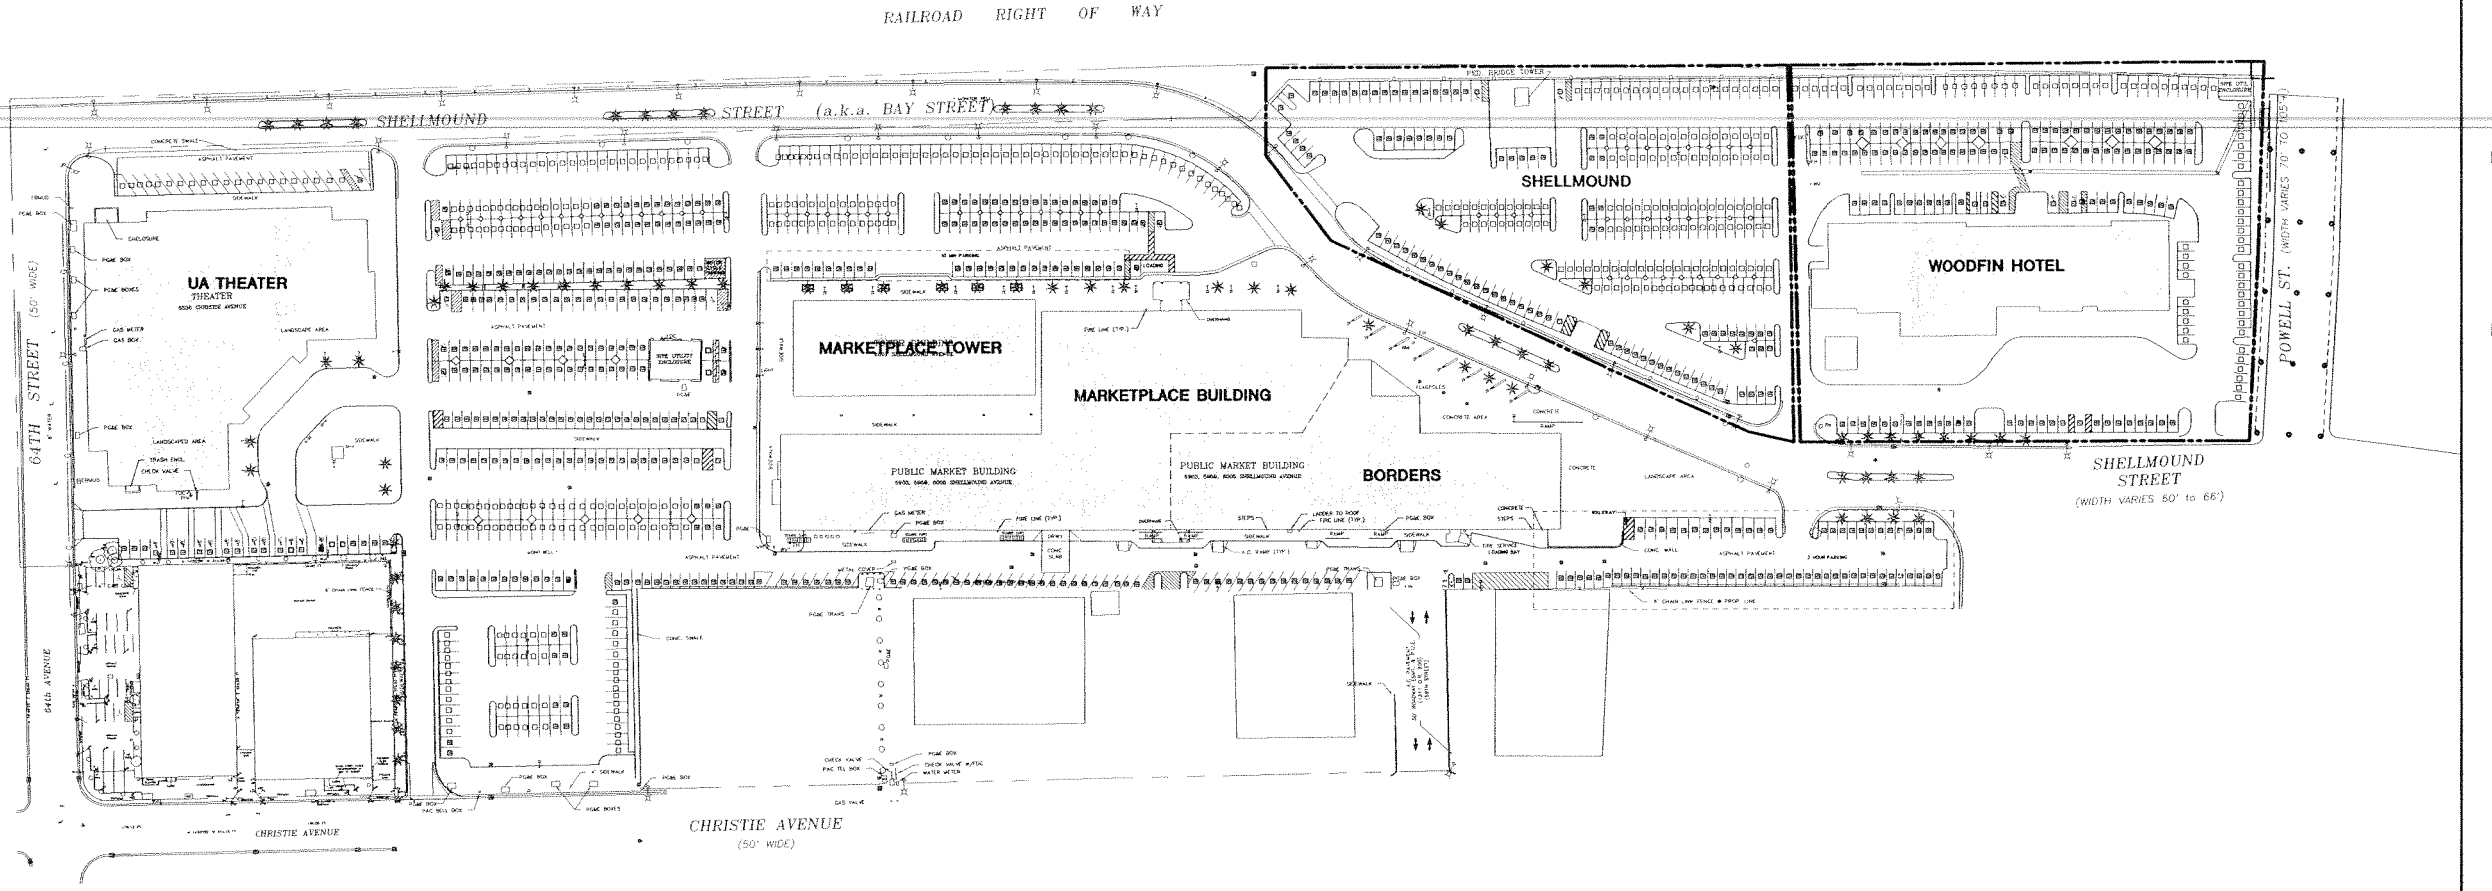
Notes to Proposed Budget

All estimated costs shown apply to each lot separately and are based on current (2005) costs

Operating Expenses	
Payroll	Based on 16 Hours per Day of Staffing @ $10.00/hr.
Vacation/HolidaySick Accrual	6.54% of on-site labor
Total Payroll	**Total of Actual and Accrued payroll amounts; basis for calculation of p/r taxes, workers comp. and other benefits**
Payroll Taxes	Estimated @ 9.5% of Total Payroll over 1st year; Actual amounts will vary by month, based on total wages paid to individuals
Worker's Compensation	16.43% of Total Labor
401K Plan Expense	Estimate based on 1% of on-site payroll. Will vary depending on the number and level of employees participating.
Health & Welfare	Est. based on current rate of $763/mo. per employee X 2 employees
Uniforms	(2) employees @ $12/week each - full uniform package (w/foul weather gear) and laundry service
Insurance	Current valet rate of $65.01 per stall per year, based on maximum capacity of 103 cars (Christie lot) or 95 cars (Powell lot)
Booth Rental	Estimate cost to rent a basic valet booth
Tickets, Forms, Supplies	Estimated cost to provide these basic operating supplies
Auto Damage	Estimate only - Client will be charged actuals in this category, subject to a $2,500 dedcutible per occurrence.
EDP & Accounting Fees	Fixed cost to provide off-site administrative services
Supervision Fee	Fixed cost to provide off-site management and supervisory support services
Miscellaneous Expense	Est. cost to provide miscellaneous items which may be incurred in operation of facility
Management Fee	Ampco's profit for providing valet parking services
Start up costs	Estimated costs for locking key boxes, cones, and basic signage
Total Other Direct	**Total of all costs not including Total Payrol**
Total Direct Expenses	**Total of all operating costs including Total Payrol**

Please note: ALL COSTS DESCRIBED (WITH THE EXCEPTION OF THE FIXED EDP, SUPERVISION AND MANAGEMENT FEE) ARE ESTIMATES AND WILL VARY EACH MONTH. CLIENT WILL BE CHARGED AMPCO'S ACTUAL COST OF PROVIDING ALL GOODS AND SERVICES REQUIRED IN THE PROVISION OF THE SERVICE, WITH EACH COST ITEMIZED ON A MONTHLY STATEMENT, SUPPORTED BY FULL BACKUP (PHOTOCOPY OF INVOICE) TO SUPPORT EXPENSE.



P0 - EXISITING PARKING REQUIREMENT

Intersection Summary
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.
